DC White & Co

OVER THREE DECADES OF SERVICE IN NORTH EAST LONDON

DC White have been repairing vehicles from the same location for the last three decades. When first established, the workshop was just one of many units in the driveway at the rear of Hoe Street. Now DC White occupy the whole area with each unit housing a different department of repair from strip and fit, panel repair, painting to valeting.

RENOVATION

One of the main reasons for the success and longevity of the business is the service that is provided. The customer is given a straightforward no nonsense service starting in the comfort of the reception area.

Information is entered on to computer and the repair process is monitored electronically.

COMMERCIAL VEHICLES

High Technology Repair

The repair will be done using state of the art equipment that ensures the car is returned to its original condition.

The workshop is equipped to the highest specification which makes our job easier and the repair more accurate. Our investment in the latest equipment is something we take seriously, constantly looking at new products that will not only speed up but improve the repair.

We provide a professional service for all types of customer, whether the job be for an insurance company, private individual or one of our fleet user accounts. We have a

recovery service and courtesy cars and vans are available.

For heavy accident repairs, our computerised measuring system enables us to re-align your vehicle to the specified tolerances allowed.

The Latest Water-Based Paint Systems

Paint and its application is the area that has seen more change than any other area in the vehicle repair shop. We use the latest equipment available to enhance the work we do and protect the planet.

Panels are prepared using a top of the range dust extraction system which isolates harmful dust.

Our paint system features the latest Waterborne High Solid products which lessen the solvent emissions which we produce. Our paint is dried using the

RECOVERY TRUCK WITH WHEEL LIFT

latest air drying techniques and filtered spraybooth technology.

When painted, the care goes into final inspection to make sure it is completed to our exacting standards. Then it is washed ready for collection or delivery. If required, a full valeting service can be offered.

Having an accident is never easy but if the worst happens, let us take the pain away by offering you a stress-free repair.
